## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 4-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Fuchs et al.(6,329,954).

Claim 1, figures 22-25 disclose a quadrifilar radiator(210), a pcb as recited(col. 4, lines 14-19), and a monopole array(220).

Claims 4-5, the monopole array elements(220) are positioned and connected(abstract)as recited.

Claim 6, figures 22-23 disclose two coaxial cables with each being connected as recited.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2821

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-3, 7-11 and 12-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fuchs in view of Leisten et al.(6,300,917).

Claims 2, 11-12, 16 and 20, figures 22-25 of Fuchs disclose a cylindrical dielectric and coaxial cables, but not a balun. Figure 5 of Leisten discloses a balun(40) which is positioned between a lower part of the coaxial feed(34) and the helical elements(30A-30D) for an improved antenna(col. 3).

Claims 3, 13 and 20, the quadrifilar element disclosed in Fuchs is for circular polarization(abstract).

Claims 7-8 and 16-17, Fuchs does not disclose cross V dipole elements. Figure 5 of Leisten discloses V elements(30AR-30DR).

Claims 9-10, 14-15 and 18-19, see above references to Fuchs.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the balun and V dipole elements as disclosed in Leisten with the antenna disclosed in Fuchs for an improved antenna as disclosed in Leisten.
